Tutorial Time :

1. The following message **"1111011"** is transmitted using a data link layer that applies the hamming coding technique with even parity check. The resulting parity bits equals:

   P0= ………
   P1=……….
   P2=……….
   P3=……….

2. The bit-stream **"1001011"** is transmitted using the standard CRC method. The generator polynomial is $x^3 + 1$. the actual bit string transmitted over the physical layer is: ……………..
